DMET 1075

Task 2 - AR

In this task, we are going to go through the basics taught in the lectures and follow through the video attached below for AR development on the latest AR foundation setup and Unity 6.

https://www.youtube.com/watch?v=bARrOv48ZSQ

The goal of the task is to experiment with marker based AR (Multiple Images Tracking). The video provides sequence for both android and Iphone (however I personally tested it for android only). Images should be unique and for each task submission and you will need to show your capability of changing parts of the sequence upon request.

Your submission should follow through the steps in the video and provide the following:
1- The ported AR app on a mobile
2- A video of the app
3-The project itself should be brought over with a laptop

To be Uploaded :

1- A document explaining the sequence of steps and issues faced, platform exported to and including link for video.
2- The application file

Submission date : Sunday 19th of April
Discussion : Monday 20th of April during the lecture
